EDUCATION

University of Toronto

CGPA: 3.88/4.00

Honours Bachelor of Science (HBS), Computer Science and Applied Statistics

Expected April 2028

Relevant Coursework: Algorithm Design & Analysis, Operating Systems, Databases, Software Design

EXPERIENCE

Attendify

Cambridge, ON

Software Engineer Intern

Jun 2026 - Sep 2026

- Led **Attendify Wrapped**, a year-end recap for daycare franchises, from architecture proposal to full build: presented the design to the engineering team, prototyped a demo branch, then built the data model, a cron job computing **17 stats per franchise** (care hours, billing totals) without modifying source data, and the dashboard in **PHP (CodeIgniter)**.
- Audited controllers, models, and libraries for **SQL injection**, tracing user input to database calls; fixed all high- and medium-severity findings with parameterized queries.
- Extended subscription-renewal invoicing with **automated email delivery**, mark-paid tracking, and overdue detection; refactored it into a mailer library and built the Account Invoices page.
- Built a role-scoped admin activity dashboard with before-and-after field-change logging; fixed the app-wide "Confirm Form Resubmission" error with a **Post-Redirect-Get** shim.

Code Ninjas

Brampton, ON

Coding Instructor

Apr 2026 - Present

- Teach **100+** students from elementary school through Grade 10 across JavaScript, C#, Unity, Scratch, and game development, guiding them from programming fundamentals to completed projects.
- Designed and led a **12-week introductory Python course**, developing the curriculum from scratch for students with no prior programming experience.

PROJECTS

HeyCare | React, TypeScript, Supabase, Web Speech API, OpenRouter

[GitHub](#)

- Built a **voice-first clinical documentation assistant** in a five-person hackathon team, integrating the Web Speech API, Supabase Edge Functions, and OpenRouter's GPT-4o mini to transform live consultations into structured, editable patient notes.
- Implemented an **end-to-end patient-record workflow** with extraction of 14 clinical fields, speaker-labelled transcripts, Supabase CRUD and multi-field search, fallback handling for failed AI analysis, and TXT/printable HTML exports.

mysh: Unix Shell & Networked Chat | C, Linux, Systems Programming, Sockets

[Project Details](#)

- Built a **Unix-style shell in C** with variable expansion, custom built-ins, multi-stage pipelines, background jobs, and signal handling using fork, execvp, waitpid, and dup2.
- Extended the shell with **select-based multi-client TCP chat**, multiplexing terminal and socket input without threads and managing active connections through linked lists.

ASL Learning Hub | JavaScript, MediaPipe, HTML/CSS

[GitHub](#)

- Built a browser-based ASL practice application for A-Z and numbers 1-10, using **MediaPipe Hands to track 21 landmarks** and score gestures in real time.
- Implemented **real-time confidence feedback**, live skeleton overlays, lessons, achievements, and locally persisted progress in a responsive interface.

JavaFX Paint Application | Java, JavaFX, MVC, REST APIs

[Project Details](#)

- Built a JavaFX paint application using **MVC and Strategy, Factory, Command, and Observer patterns**, supporting seven drawing tools, undo/redo, configurable styling, and PNG export.
- Integrated **prompt-to-canvas generation** by converting structured JSON into reusable drawable objects; added persistent themes, colour-blind palettes, and keyboard shortcuts.

TECHNICAL SKILLS

- **Languages:** Java, Python, JavaScript, TypeScript, PHP, C, C++, C#, SQL, Bash, Assembly
- **Frameworks & Platforms:** Node.js, Express.js, CodeIgniter, React, REST APIs
- **Databases:** MySQL, PostgreSQL, Supabase
- **Tools:** Git, GitHub, Linux, Docker, Claude Code, Cursor, GitHub Copilot
